Water Production Drops at Great River

...customers will experience low pressure and intermittent supply

Output from the Great River water treatment plant in St. James has fallen by 50 per cent as a result of single-phase electricity. The NWC is still pumping water via its standby generator, but customers, especially those in elevated sections of St. James and Hanover will experience low water pressure or intermittent supply.

Affected areas in St. James include:

Queen's Drive, Leaders Avenue, Felicity, Mango Walk, Glendevon, Salt Spring, Brandon Hill, Rosemount, Cornwall Courts, Rose Heights, Farm Heights, Sun Valley Road, Rectory Drive, Albion, Anchovy, Childermas, Lethe, sections of Comfort Hall, Wiltshire, Guava Walk, Spring Gardens, Belmont, Tower Hill, Moy Hall and Unity Hall.

Affected areas in Hanover include:

Cue, Elgin Town, Johnson Town, Lucea, Brisette, Hoist, Malcolm Heights, Cacoon, Dias, First Hill, Montpelier, Bamboo, McQuarrie, Woodland and Blenheim.

The NWC will resume normal operations as soon as the power services provider resolves the problem and the lines are charged. In the meantime, customers may call the NWC contact centre at 888-225-5692.
