Residents are being urged to carefully manage water supplies, when received, and to seek to obtain additional storage capacity based on familial needs. Trucking is being done, where possible, to some communities, but will not be adequate as a substitute for the volumes provided through normal piped water supply.

Additionally, the NWC is advising that this schedule may be impacted by unplanned breaks and other occurrences especially on the Constant Spring supply network, which may arise as a result of current road works being conducted under the major infrastructural development programme, in that vicinity. The National Water Commission continues to work diligently to achieve full service coverage in the stipulated timelines across the affected areas.

We apologize for any inconvenience caused to our customers.
